Therabreath Reviews - Aktiv-K12 ProBiotics: Everything You Need To Successfully Conquer Chronic Bad Breath

The **Aktiv-K12 ProBiotics** product line is Therabreath's innovation to treat those who have chronic bad breath stemming from a number of different possible causes. Bad breath is often very difficult to treat, as most treatment methods are short-term ones that only work for hours at a time, at best. It is clearly more convenient and better in the long run to find a treatment that works for a longer period of time, but finding a product that accomplished that goal was very difficult before [Therabreath's Aktiv-K12 ProBiotics](#) line was designed. Keep reading to see if this Therabreath review of the Aktiv-K12 is right for you.

Overview

The secret to the success of Aktiv-K12 ProBiotics is the presence of *Streptococcus salivarius* strain K12. This element helps to fight off bad breath naturally, and since a huge minority of the general population (estimated at about 2% of all people) have this solution develop naturally in their mouths, the rest can benefit from the usage of a product like that provided with Aktiv-K12 ProBiotics. This method removes, then replaces the bacteria that causes bad breath, which provides a solution that is much more reliable than that of a mouthwash or other over-the-counter product.

Advantages

One of the advantages to [Therabreath's Aktiv-K12](#) line is that you only have to complete the recommended treatment schedule of a 30-day cycle every six months for the desired results. This is a much better solution than all of the short-term solutions that you find elsewhere, even if those seem like a less expensive alternative. Also, there are Aktiv-K12 lozenges that work in conjunction with the AktivOxygen Serum to blend with your saliva and treat the area on the back of your tongue, where bacteria that causes bad breath typically breeds. With traditional dental hygiene products, it is very hard to treat that area. This product utilizes a ten-day regimen to treat your bad breath issues effectively.

Disadvantages

The main disadvantage to the Aktiv-K12/Oxygen product line would appear to be the cost, but a closer look reveals that these products provide more bang for the buck than many alternative products that do not work nearly as well. After all, Aktiv-K12 ProBiotics only needs to be used for two months out of every year, whereas

over-the-counter mouthwashes usually require two to three uses per day, which do not even effectively vanquish your bad breath for more than an hour or two at a time. When you look at it that way, you can see that these products are a very good value compared to what else is out there.

Who can benefit the most

Anyone who was not lucky enough to be born with naturally good-smelling breath would benefit from the usage of these excellent products. Therabreath has put in a lot of time and effort researching the causes of and how to stop bad breath, as well as sore throats and other issues, in order to develop the products that they now have put on the market, which effectively treat these problems. Their track record in treating such problems speaks for itself, and if you are interested in having fresher breath for more than a few hours at a time, these products may be right for you.
